THE SECURITY from FIRE which results from the adoption of the system of constructing FLOORS, CEILINGS, and ROOFS, invented and patented by Dr. FOX, is attained WITHOUT any INCREASE of COST. In the system the ordinary timber joists are superseded, and light iron joists in which the requisite degree of strength is developed by combination are substituted; these, further with successive layers of incombustible materials, forming a perfectly fire-proof foundation, capable of receiving a finished surface of wood, composition, stone, slate, or tile, &c. This plan of building possesses much greater durability than the ordinary method; the structure is effectually protected from the attacks of Dry-rot; and the annoyance resulting from vermin and insects of all kinds is entirely prevented.

The advantage of this system, whether in Dwelling-houses, Warehouses, Manufactories, or other buildings, is manifold with economy—immediate, in the reduction of the first cost; and progressive, in the absence of charges for repairs. Every advantage attained by the ordinary methods of fire proof building is effectually secured at about one half the cost, while the lateral thrust, so objectionable in the iron girder and brick arch system, is entirely avoided. The great superiority of this plan has been proved by many years of trial, and every information may be obtained on application to Messrs FOX and BARRETT, Leicester Chambers, 48, Leicester square.
